

Screening of hazardous substances in urban groundwater (2016-2017)

Johan Carlström, by Jenny McCarthy

2019-05-23

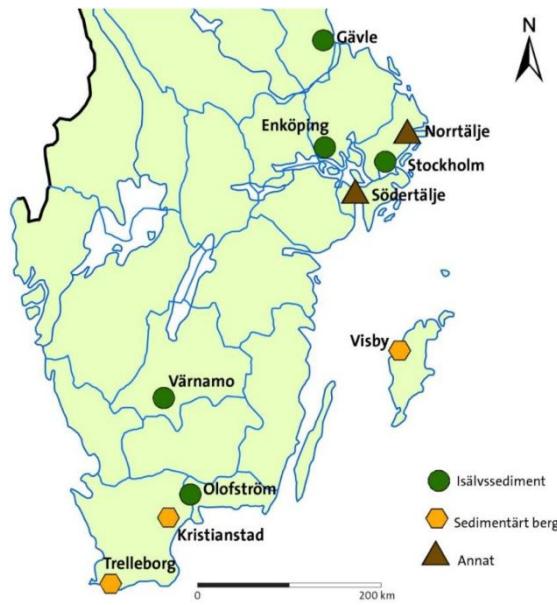

Parameters

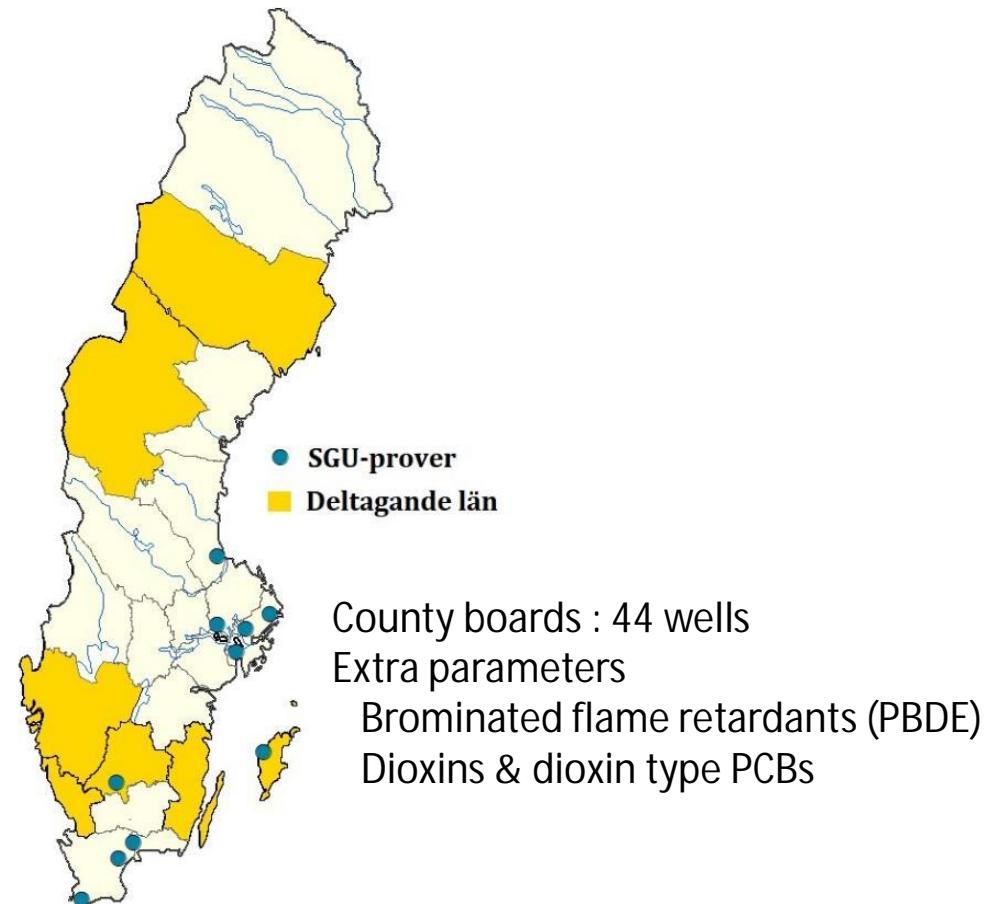

- Pesticides
 - PFAS substances
 - Halogenated aliphates + BTEX (benzene, toluene, ethylbenzene and xylenes)
 - Polycyclic aromatic hydrocarbons (PAHs)
 - Phenolics
 - Phthalates
 - Organotin compounds (tennorganiska ämnen)
 - Pharmaceuticals
 - Dioxins, dioxin-like PCBs
 - Brominated flame retardants
 - Chemical elements (grundämnen)
 - Basic parameters (basparametrar) (alk, ammonium, fluoride, phosphate, nitrate etc)
- $\Sigma \sim 250$ parameters

Monitoring sites

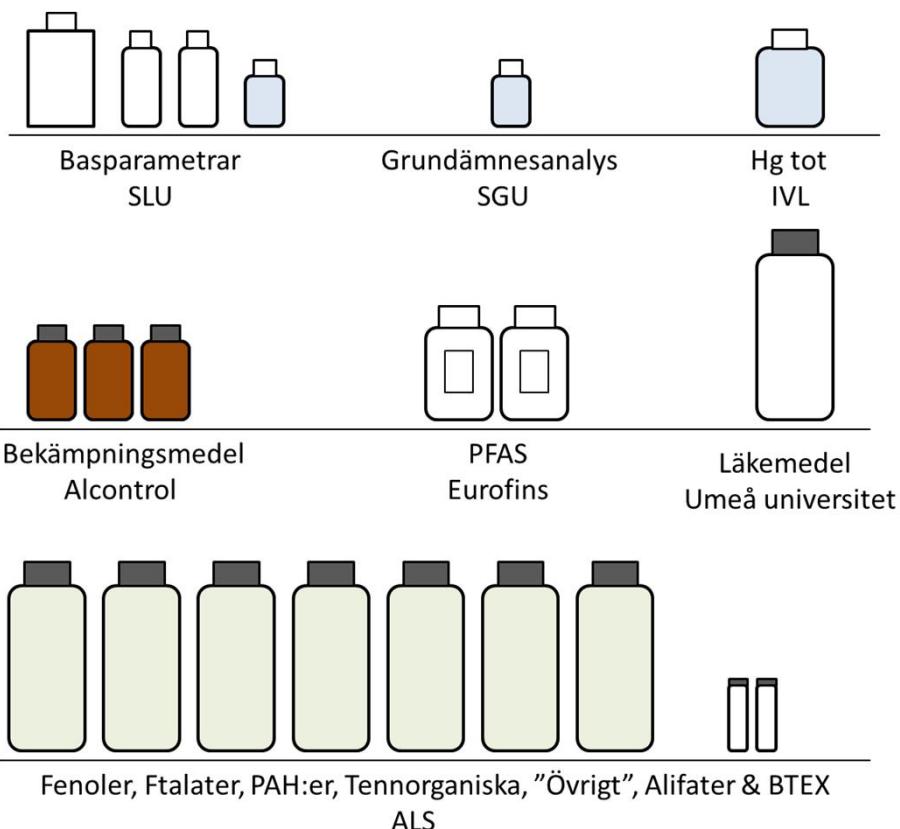

Public water supply wells in urban areas

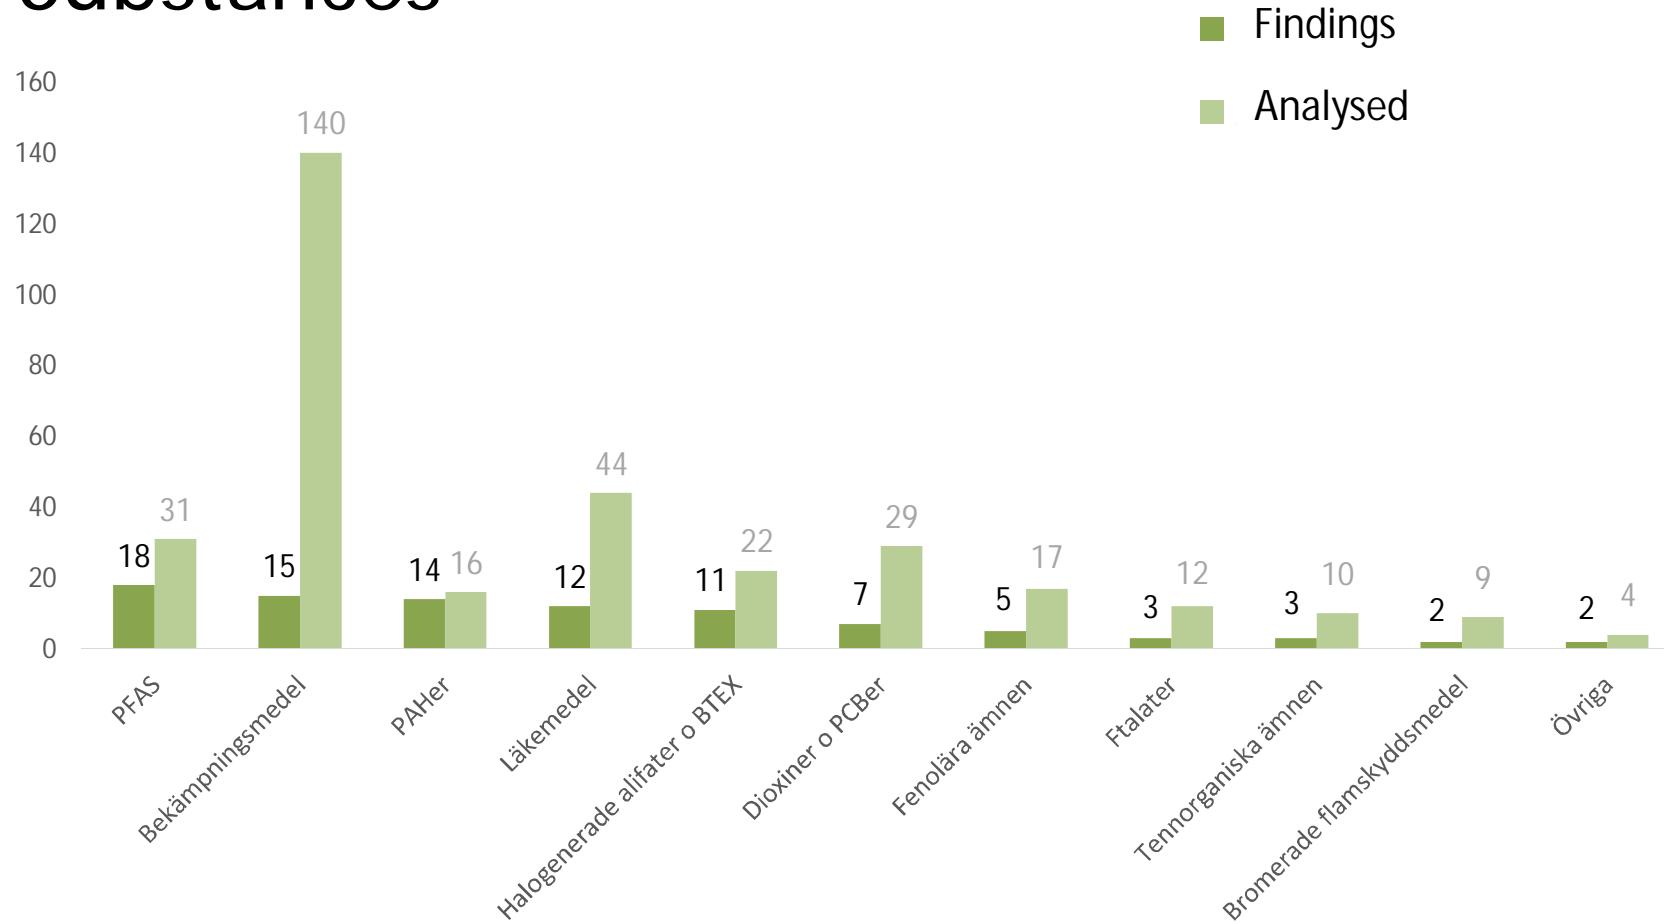

National: 33 wells in unconfined conditions,
catchment in urban area, different geological
settings

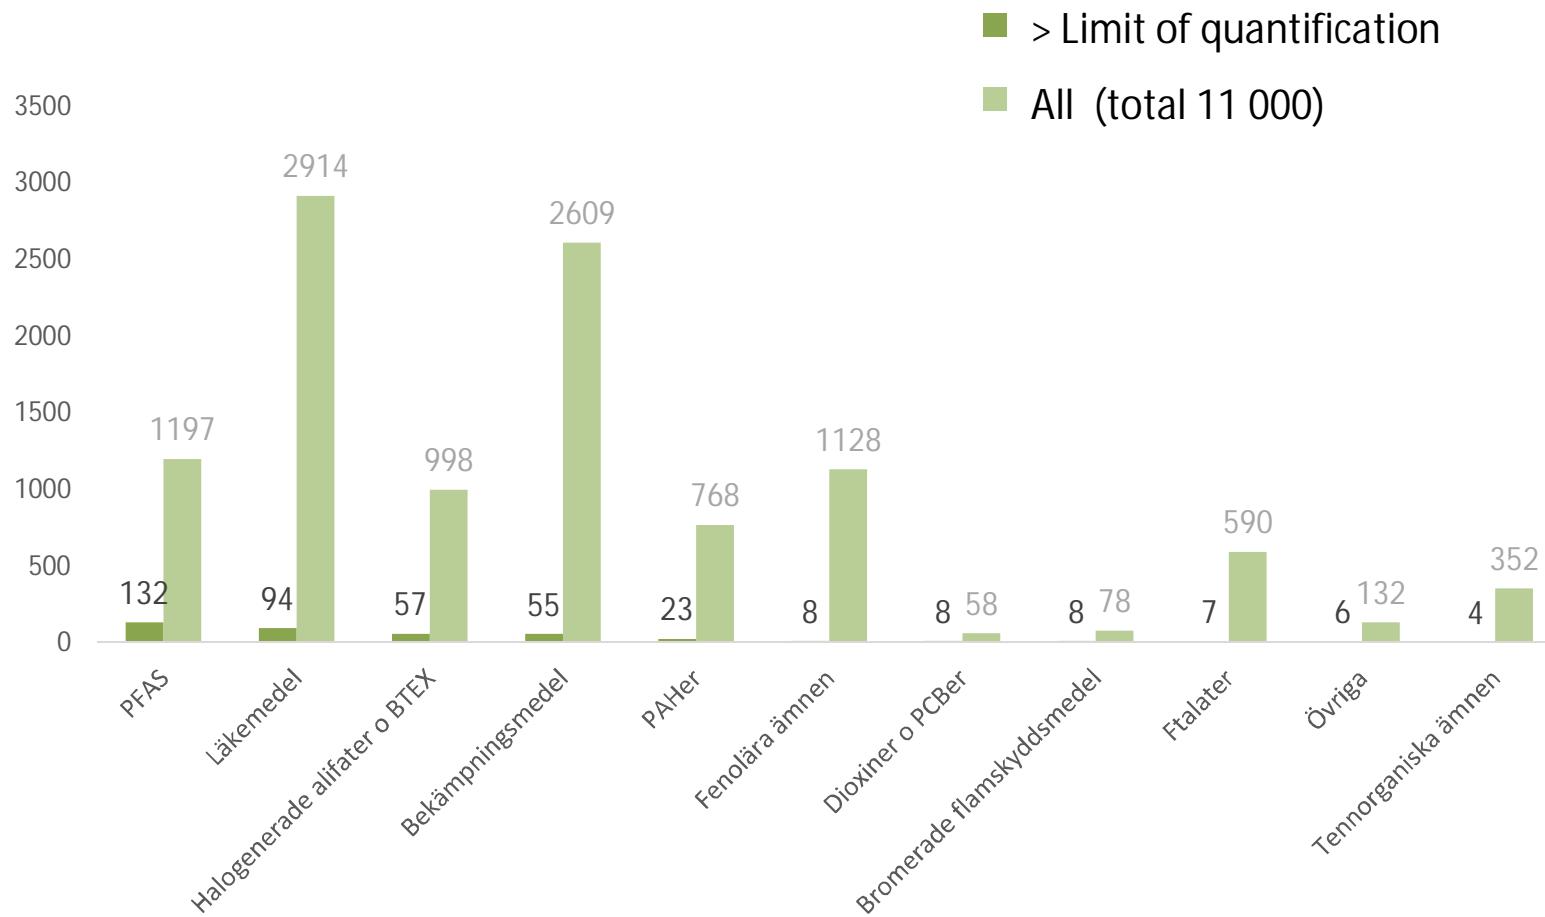

Different laboratories

Substances

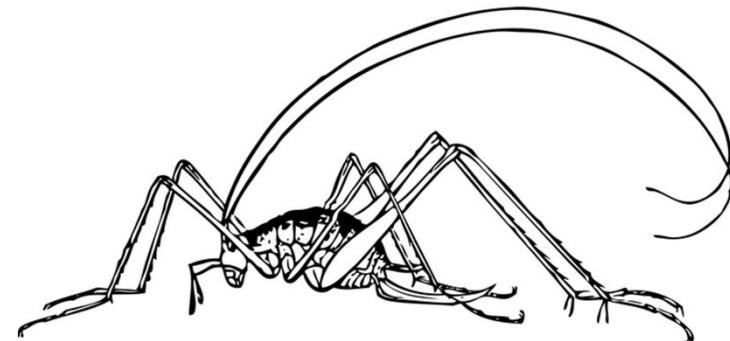

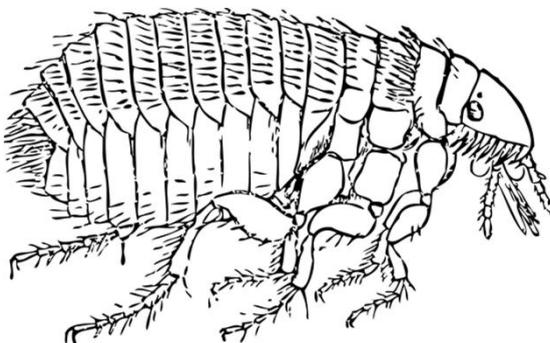

Samples

Results - pesticides

- Found in 27 of 48 wells
- BAM in 25
- Atrazine + desetyltriazine (from "Totex strö") was also common (9 + 8 findings)
- Highest conc - ETU (Etylentiourea): 0,27 ug/l

Results - pesticides

Ämne (ug/l)	Median, alla prover	Antal prover	Antal fynd	Min, end. funna	Max, end. funna
<u>2,4-diklorfenoxisyra</u>	<0,003	48	1	0,006	0,006
2,4-Diklorprop	<0,003	48	1	0,004	0,004
<u>AMPA</u>	<0,004	48	1	0,042	0,042
Atrazin	<0,003	50	9	0,001	0,009
BAM	≤0,007	48	25	0,004	0,11
<u>Bentazon</u>	<0,003	48	2	0,007	0,029
Desetyl-atrazin	<0,003	48	8	0,001	0,038
Dieldrin	<0,00067	2	1	0,00034	0,00034
Endrin	<0,0023	2	1	0,0016	0,0016
ETU (Etylentiourea)	<0,01	37	1	0,27	0,27
Kloridazon	<0,003	48	1	0,003	0,003
Mekoprop	<0,003	48	1	0,025	0,025
Pentaklorbensen	<0,015	2	1	0,03	0,03
<u>Pirimikarb</u>	<0,003	48	1	0,003	0,003
Simazin	<0,003	49	1	0,005	0,005

Results - PFAS

- Difficult to sample
- 18 substances found (of 31 analysed)
- Found in 2/3 of the wells
- 6:2 FTS only in one sample
- Highest conc - PFOS: 47 ng/l

Results – halogenated aliphates+ BTEX

- Trichloroethene (TCE) in 15 of 51 samples (most common)
- Tetrachloroethene (PCE) in 7 of 51 samples
- Threshold value 10 ug/l for tri+tetra was not exceeded
- TVs for 1,2-dikloretan, bensene and sum trihalometaner were not exceeded
- cis-1,2-dikloreten second most common

Results - pharmaceuticals

- 94 samples above limit of quantification
- 12 substances above limit of quantification
- Highest conc – Paracetamol 289 ng/l

Results - pharmaceuticals

Most common :

- Karbamazepin (antiepileptika)
- Flukonazol (svampmedel)
- Trimetoprim (antibiotikum)
- Paracetamol
- No caffeine!

Snitt: 7 per well

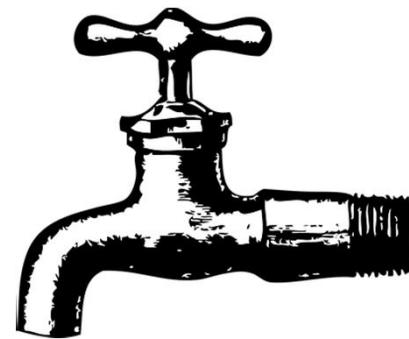

Conclusions

Substances most often found were:

1. PFAS
2. Pharmaceuticals
3. Halogenated aliphatics + BTEX
4. Pesticides

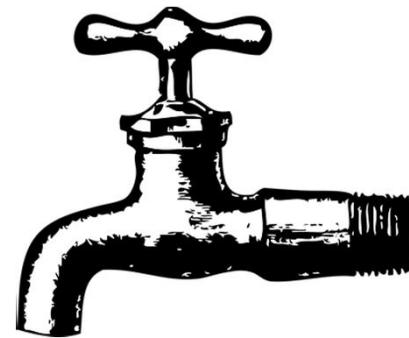

PFAS was found above LoQ in 2/3 of all monitored wells, but it was difficult to get reliable results. Recommended to take verifying samples before measures are implemented

More findings of hazardous substances in sand/gravel aquifers than in bedrock aquifers

In general low concentrations (from a human health perspective), but high variety of hazardous substances found

Summarised in SGU-rapport 2019:02 In swedish
